
NEW ECOMM DOMAINS FAQ

In the four plus years since Vantiv acquired Litle & Co., virtually all of our systems and operations have been incorporated into the Vantiv family of platforms. It has become time to complete this process by moving the remaining Litle domains into the Vantiv architecture. This FAQ document is intended to provide information about the changes required to implement the use of the new domains on your systems, as well as answer several common questions related to the changes.

What do I have to do?

Because the domain changes affect virtually every URL you use to submit/test transactions on our eComm platform, you will have to change all the target URLs used by your systems to communicate with our platform.

Is there a deadline to complete the changes to my systems?

Yes. You must complete all changes no later than August 31, 2017. Please speak to your Vantiv eComm Merchant/Partner Relationship Manager immediately about contingency plans, if this proves impossible to meet.

What happens if I do not make the required changes prior to the deadline?

Once we complete the switchover and turn off the old domains/URLs, transactions and other submissions to the old URLs will fail.

Do these changes impact my credentials (i.e., userName and password)?

No. There is no requirement to change your credentials. They will continue to work without any changes/modifications.

What should I do if I use a partner or gateway to submit transactions to the Vantiv eComm platform?

Your partner/gateway must make the required changes by the deadline to ensure uninterrupted service. In this case, any impact on your operations should be small, if any; however, please keep in mind if you use other services directly from Vantiv eComm, such as Account Updater requests, accessing eComm iQ, etc., you must make changes on your systems to continue to access these services.

I am an Enterprise/Omnitoken Merchant using eProtect™; which eProtect URLs should I use?

All of new eProtect URLs are listed in [Table 3](#), “eProtect Production Environment,” and [Table 6](#), “eProtect Certification/Test Environments.” The URLs specific to Enterprise eProtect Merchants (JavaScript Library and iFrame) are marked as such in the ‘Use/Comments’ column.

Why do the JavaScript library URLs for eProtect still include ‘litle-api2’ or ‘litle-api3?’

We will continue to support the JavaScript ‘litle-api.js’ filenames for a period of time. You only need to change the domain names prior to the filename, as indicated in [Table 3](#), “eProtect Production Environment,” and [Table 6](#), “eProtect Certification/Test Environments.”

What are the new Domains/URLs?

The tables below provides information about the old/new URLs:

- [Changing URL List - Production Environment](#)
- [Changing URL List - PayFac Production Environment](#)
- [Changing URL List - eProtect™ Production Environment](#)
- [Changing URL List - Certification/Test Environments](#)
- [Changing URL List - PayFac Certification/Test Environments](#)
- [Changing URL List - eProtect Certification/Test Environments](#)

TABLE 1 Changing URL List - Production Environment

Old URL	New URL	Use/Comments
https://payments.litle.com/vap/communicator/online	https://payments.vantivcnp.com/vap/communicator/online	Online transaction processing
https://payments.litle.com:15000	https://payments.vantivcnp.com:15000	Batch transaction processing
